OWAY Hair Rebuilding is the method that rebuilds hair that is damaged due to poor hair structure, repeated chemical treatments, mechanical stresses, environmental aggressions and thermal instruments. The hair is dull, breaking, has rough and porous structures, reduced duration of colour retention and lack of essential elasticity. At this level of hair damage, it is not enough to act just on the surface of the hair; the action must be combined with professional treatments that can restore the hair substance.

OWAY rebuilding packages can offer regenerated, softer, more flexible and more resistant hair. All these hair benefits will enhance any hair type especially recovering from hair growth problems. OWAY hair rebuilding system is not a one-off miracle treatment and needs a customised hair rebuilding treatment package delivered over 8 weeks along with a home routine rebuilding bath and mask to maximise results.

Intensive Rebuilding Treatment includes the Action of INFRARED HAIR REMEDY – UNTRASONIC AND INFRARED RADIATION PLATE. The infrared Hair remedy is an innovative ultrasonic and infrared radiation plate for regenerating hair treatments. It seals and thickens the hair cuticle layers, repairs tissue capillaries, prevents split ends, keeps hair bouncy and retains colour over time. Infrared rays have been used for years in aesthetic medicine therapies that regenerate cell tissue and repair aging effects, in the hair care field, infrared therapy is used for cellular energy. Heat is produced by the electromagnetic vibrations of the infrared ray and is a type of heating that comes from within and is not harmful. Ultrasound is an outstanding conveyor that optimises any treatment. From one treatment to the next, the hair improves in cosmetic appearance, structural feel and remains healthy.
